DESCRIPTION OF THE PREFERRED EMBODIMENTS

Please replace the paragraph beginning at page 4, line 27, with the following rewritten paragraph:

A porous electron-conducting layer 7, such as a layer of nickel oxide which on sintering and reduction is converted to porous nickel is applied to layer 6. The thickness of such a layer is less than 100  $\mu\text{m}$ , preferably approximately 50  $\mu\text{m}$ , at the time of application, so that a layer thickness of 10 - 20  $\mu\text{m}$  results on sintering.

Please replace the paragraph beginning at page 5, line 5, with the following rewritten paragraph:

A current collector 8, indicated highly diagrammatically, presses against layer 7.
